Hamza Latif

Senior Full-Stack Engineer | Node.js, NestJS, TypeScript, React/ Next.js | Python, FastAPI | AWS | LLM & RAG | Open to Remote Roles

Lahore, Punjab, Pakistan

Summary

I build backend-heavy web platforms that stay fast and reliable as they grow, and I'm increasingly the engineer teams call when they want AI features in production, not just in a demo.Over 7+ years, I've shipped everything from a real-time ticketing system handling 4,000 concurrent users, to a modular ERP used by 120 people, to data pipelines pulling from 80+ external sources. Most recently at SlySol, I've been building full-stack products and LLM-powered features, including document extraction pipelines processing 20,000 documents a month with LangChain, RAG, OpenAI, Ollama, and OCR.What I bring:• Full-stack depth: Node.js, NestJS, TypeScript, React, Next.js, plus Python (Django, FastAPI)• API design: REST and GraphQL, RBAC, authentication, third-party integrations• Cloud and delivery: AWS, Docker, Kubernetes, Terraform, CI/CD (I cut one team's deploy time from 2 hours to 30 minutes)• Applied AI: LLM integrations, RAG pipelines, AI agents, built for production reliabilityI care about clean architecture, measurable performance wins, and shipping things that people actually use.Open to fully remote Senior/ Staff-track engineering roles. Message me on LinkedIn or email hamzalatif.dev@gmail.com.

Experience

SlySol

Senior Full Stack AI Engineer
April 2023 - Present (3 years 7 months)
Lahore, Punjab, Pakistan

- Automated data pipelines across 80+ external sources using Celery (extraction, validation, transformation), cutting manual processing by 70%.
- Led end-to-end delivery of full-stack products in TypeScript, React, Django, and FastAPI, serving 10,000 users across 20 client projects.

- Architected REST and GraphQL APIs with role-based access control powering dashboards and complex workflows, handling 10,000+ requests/day at 300 ms p95 latency.
- Reduced deployment time from 2 hours to 30 minutes 75% by containerizing services and implementing Docker, Terraform, and CI/CD on AWS.
- Shipped LLM-powered document extraction using LangChain, RAG, OpenAI, Ollama, and OCR, processing 20,000 documents/month at 77% extraction accuracy.
- Partnered with frontend, backend, and data teams to improve reliability and performance, e.g., reducing incident rate/downtime by 70%.

Programmer Force
Software Engineer
October 2021 - March 2023 (1 year 6 months)
Lahore, Punjab, Pakistan

- Designed a modular ERP suite (Inventory, HR, Finance, CRM) adopted by 120 users across 30 teams.
- Cut API response times by 70% by moving heavy workflows to Celery background jobs.
- Built secure REST APIs with JWT, RBAC, validation, and third-party integrations.
- Optimized PostgreSQL schemas and queries for high-volume operations, reducing query time from 1s to 200ms.
- Integrated Stripe to automate payments and billing workflows.
- Reduced issue-resolution time by 40% by implementing centralized logging with the ELK Stack.

Nextbridge Ltd.
Full Stack Developer
August 2019 - September 2021 (2 years 2 months)
Lahore, Punjab, Pakistan

- Engineered real-time ticket booking and availability workflows supporting 4,000 concurrent users with transactional integrity (no double-bookings).
- Built organizer dashboards (schedules, pricing, registrations, sales analytics) in React, Redux, and Material UI.
- Developed Node.js and Django REST APIs for user management, events, and ticketing, with JWT auth and secure session handling.
- Designed PostgreSQL schemas and optimized complex Django ORM queries.

Education

University of Central Punjab (UCP)

Bachelor of Science, Computer Science · (February 2016 - March 2020)
